(54) Title: CAPSULE FILLING MACHINE

(57) Abstract: The capsule filling machine is provided with special volumetric dosing stations each having two or more adjacent dosing units (9, 9', 22), fixed at equal distances from each other on the periphery of the carousel and located outside and at a distance from the product feed hopper (2), in such a way that they can be rapidly and easily replaced when there is a change in the format of the capsules to be filled, in the same way as all the other components of the machine, which is also designed for easy and rapid preparation for the washing and sterilization cycle.
